

Relive the ITTF Team World Cup in 360 degrees

Author: Rebecca Hughes

Posted On: April 25, 2018

After the glory of the Team World Cup and the Commonwealth Games, the global challenges continue to come thick and fast for England – and next up is the World Team Championships.

England men won a memorable bronze medal at the last edition in Kuala Lumpur two years ago, a feat they repeated at the World Cup in London in February.

It was an amazing four days at the Copper Box Arena, with 12,500 spectators soaking up the atmosphere – and now you can get a unique, never before seen view of the biggest table tennis event to be hosted in England for many years.

Table Tennis England has released a virtual reality 360° video that offers a twist on the usual table tennis viewing experience.

The video lets fans navigate in and around the Copper Box – offering new angles and access – by simply dragging a mouse or finger across the screen – or turning around with a VR-enabled device.

The tour starts outside as spectators pour into the venue, and then heads inside to explore the arena from all angles.

We will then take you to areas that are often off-limits to the general public.

You'll find yourself standing alongside cameramen in the very centre of the multi-court field of play – able to see the action all around you and experience the arena from an athlete's perspective.

In the training hall, we offer you an insight into life behind the scenes of a major table tennis tournament.

Get up close and personal with Team England's David McBeath and Liam Pitchford as they go through their practice drills, while teammates Paul Drinkhall and Sam Walker warm up in the background.

As you explore further you can catch Team China training, or see as Team Japan work their way through their warm-up routine.

Sara Sutcliffe, CEO of Table Tennis England, added: "The ITTF Team World Cup was a great moment for table tennis in England.

"Not only were we able to bring the world's best players to London, but we also provided a home crowd the chance to see Team England win a bronze medal on a world stage.

"By creating this immersive video we've been able to bring a bit of the Team World Cup experience to the world."

The video was produced in conjunction with the Centre for Journalism at the University of Kent.

Callum Simpson, student at the university said: "The dedication and skill on show was incredible to see close up, and it was exciting to capture 360° video of the event and to think about the capabilities for future coverage of live sport!"

Fellow student, Joe Dawson, added: "My time at the Copper Box was fantastic, the atmosphere was something I've never experienced before. Working with Table Tennis England was a pleasure and working with the new 360 equipment opened up almost infinite possibilities for interactive filming!"

How to enjoy the 360° experience for yourself:

1. **View it on your computer:** press play on the video and then click and drag your view with your mouse, or press the arrows in the navigation circle in the top-left corner.
2. **View it on your smartphone or tablet:** 360 video are not explorable via a mobile browser – you will need to have the most up-to-date version of the YouTube app. Either drag your finger across the screen to change the angle, or try moving the device around and see if it moves with you (this will only work on newer models of smartphones and tablets).
3. **View it on a Google Cardboard:** for a truly immersive experience, you can use Google's VR tech, Google Cardboard, which can be purchased for under £5. It is compatible with almost all modern smartphones. To start watching a 360 clip using the cardboard device, click on the Google Cardboard logo in the bottom right hand corner of the video and then slip your phone into the Cardboard set and you will be transported to another world.
